

Biosttek[®]

Aluminium Roofing Manufacturer

CLEANING AND MAINTENANCE OF BIOSTTEK ROOFS

As any other material, aluminum roofs also require proper cleaning to ensure optimum conservation and maximum durability. Overall, the installation and maintenance of aluminum roofs by Biosttek are quick and easy.

Cleaning and maintenance of aluminium roofs are recommended **twice a year**. Do the first cleaning beginning of spring to remove dust and accumulated dirt during winter, and second in late summer or early autumn, before the onset of rains and winds to prevent clogging of water.

The care of aluminium roofs does not require specific products. Cleaning up the surface of the roof should be done by hand with pressure hose water. Simply use a sponge (chamois or cloth) soaked in water and a **non-abrasive** soap. No need to rub too hard because the same results are obtained.

To clean the **profiles** of glazed surfaces we recommend using a steam cleaner and a soft cloth. Strip brushes of the guides must be reviewed also and changed because spoil with time and normal use.

For roofs with motorization system, an annual review of the engine and its accessories such as belts and bearings for accurate alignment and routing is highly recommended.
